

It is important to back up your iPad data regularly to avoid losing important documents, app data, photos, and more. With your family iTunes account, you automatically have 5 GB of free storage in iCloud. This should be more than enough for you!

iCloud will back up anything purchased from iTunes, photos and videos in your camera roll, device settings, app data, and home screen and app organization. If you enable iCloud backup on your iPad, it will perform the backup as long as your device is connected to Wi-Fi, connected to a power source, and the screen is locked.

### To turn iCloud backup on, do the following:

1. Open Settings.
2. Select iCloud.
3. Turn on iCloud Backup. This will turn on the automatic backups described above. *If this is your first time backing up, continue with steps 4-6.*

### The first time you set your iCloud preferences, continue with the following steps:

4. Select “Storage and Backup.”

4. Select “Manage Storage.”

5. Select your iPad.

6. Make sure any apps you want to back up are turned on. Click “Show All Apps” to see a list of all of the apps and make sure all the apps you want to back up are turned on.

*\*If you decide to choose only certain apps to back up, make sure you choose UPAD!*

### To manually back up:

1. Open iCloud in Settings.
2. Select “Storage & Backup.”
3. Select “Back Up Now.”
