11/06/2020: Beginning 11/6 IDPH began including "probable cases" in their totals. Thus we cannot separate actual cases from probable cases at the zip code level. Given that IDPH added multiple weeks of probable cases into the data for November 6, 2020, that particular day would appear to be a sudden spike. Thus, the Northwestern COVID Dashboard has excluded data from that date and resumed showing data as of November 7, 2020 (that includes actual and probable cases).

Metrics Under Review

3. COVID-19 Positive Cases Reported in D39

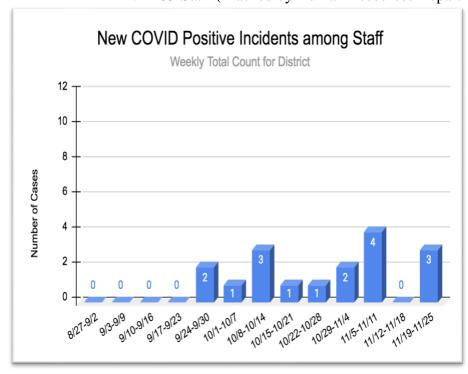

Data reported as of Wednesday at 4:00 pm. Notices for cases are provided under COVID-19 Communications on Metrics Dashboard page.

1. D39 Students (Tracked by School Nurses)

Targ	Targets for COVID-19 Cases						
	Substantial	Moderate	Minimal				
Weekly Total by District	>12	12 to 6	0				
Weekly Average by School	>3	2 to 1	0				

2. D39 Staff (Tracked by Human Resources Department)

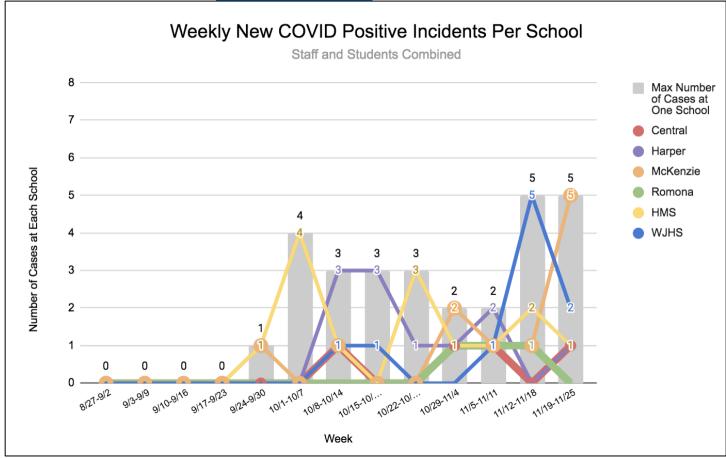

Targets for COVID-19 Cases						
	Substantial	Moderate	Minimal			
Weekly Total by District	>12	12 to 6	0			
Weekly Average by School	>3	2 to 1	0			

3. Max Number of Cases at One School

The chart below reflects a compilation of the data reported on the previous page by school.

Data reported as of Wednesday at 4:00 pm. Notices for cases are provided under COVID-19 Communications on Metrics Dashboard page.

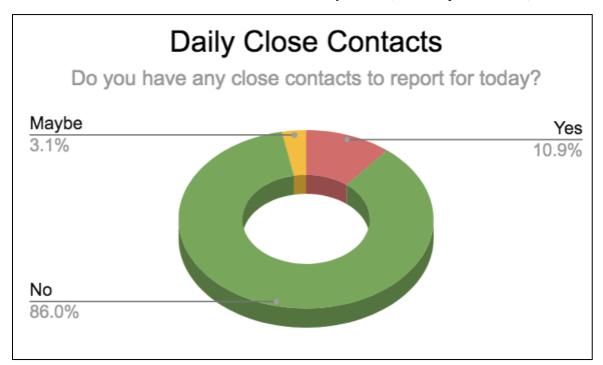

Note: The CCDPH defines an "school outbreak" as five cases. The five cases within one school this week were closely reviewed by the District and the CCDPH for within-school connection and sources of exposure. Findings: Within-school connections are not identified between these cases. Each of these cases are from different homeroom pods and different grades, with the exception of two cases identified within the same homeroom class.

Targ	ets for CO	VID-19 (Cases
	Substantial	Moderate	Minimal
Weekly Total by District	>12	12 to 6	0
Weekly Average by School	>5	4 to 2	0

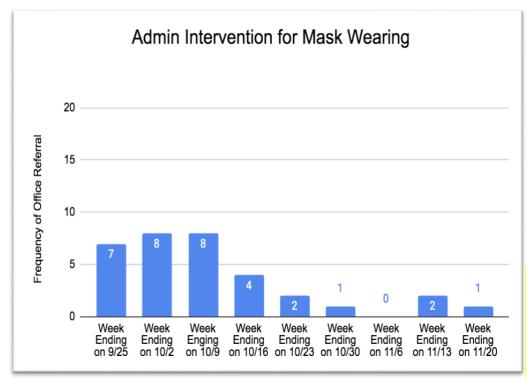

2. Operational Metrics - Are there persistent challenges that cannot be resolved?

1. Social Distancing Compliance (Monitored through a daily close contact reporting form) Every staff member is asked to complete a baseline form and then to report any close contacts that occur on a daily basis. (1585 responses total.)

Note: New strategy for monitoring social distancing and contact tracing was initiated 10/5/20.

2. Mask Wearing Compliance (# of administrative interventions)

Targets: Frequency of Reports of Persistent Challenges with Social Distancing/Mask Wearing							
Substantial Moderate Minimal							
Weekly Average by District	>24	<=24 to >6	<=12				
Weekly Average by School	>4	<=4 to >1	<=2				

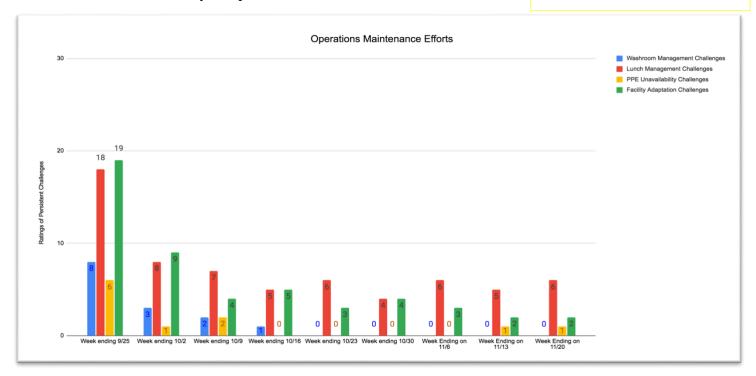

Note: The Operations Subcommittee is working to develop a new tool for monitoring operations. This new tool will replace the previous strategy that was initiated the week of 9/25. Current data reflects number of referrals to administration for mask wearing.

5. Operational Metrics, Supplies and Facilities - Are there persistent challenges that cannot be resolved?

Within the maintenance phase of school operations, principals are asked to rate ongoing management efforts related to areas of operational management, supplies and facility needs within their building. Persistent challenges are situations that arise that require attention beyond simple reminders, redirection and the regular management responsibilities performed within your school. Scale: A 10 indicates that the challenges were persistent and required 10 or more hours of attention from the principal within the last week. A 1 indicates that the challenges were minimal and required 1 hour or less of attention last week.

- 1. Washroom Break Management
- 2. Lunch Safety Management
- 3. PPE Availability Needs/Persistent Challenges Guidance
- 4. Facility Adaptations to Accommodate Health Guidance

Note: The Operations Subcommittee has finalized a new tool for monitoring operations. This tool will be used at to reflect on the next in-person week.

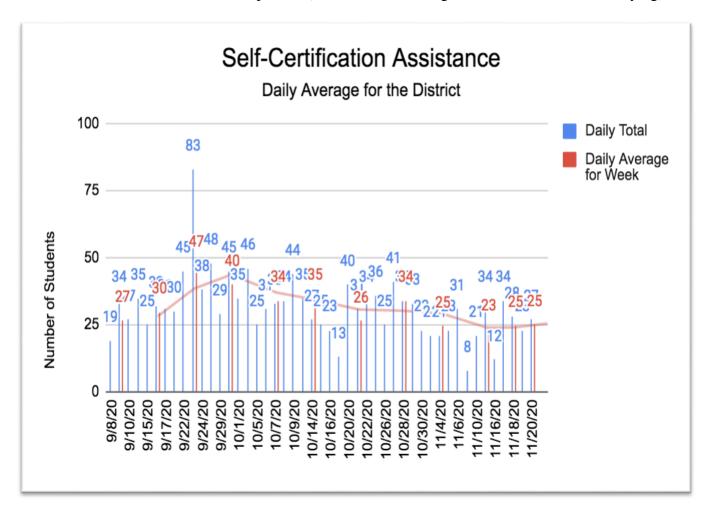

Scale:

- Each School is rated on a scale of 1 to 10.
- 0 indicates that the challenges were minimal and required approximately 1 hour or less of attention last week.
- 10 indicates that the challenges were persistent and required 10 or more hours of attention from the principal within the last week.
- The chart reflects the combined ratings.

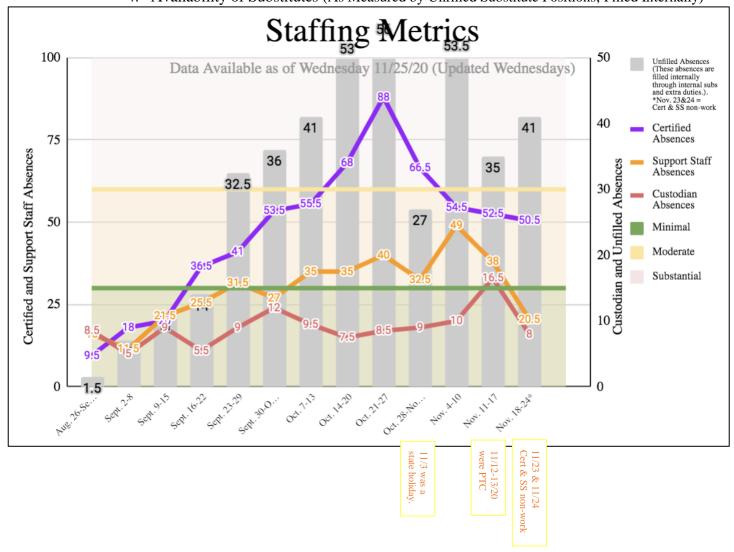

Targets: Rating of Persistent Challenges							
Substantial Moderate Minimal							
Weekly Average by District	>24	<=24 to >12	<=12				
Weekly Average by School	>4	<=4 to >2	<=2				

1. Self-Certification Compliance (# of students arriving to school without self-certifying)

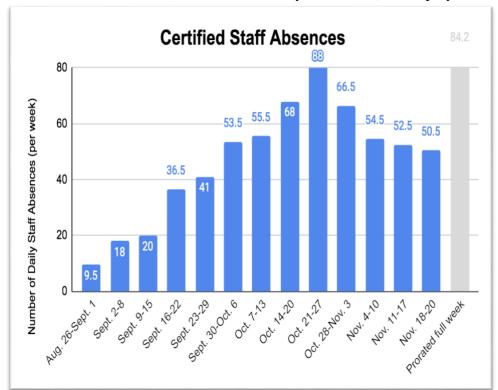

Targets for Frequency of Self-Certification Non-compliance								
Substantial Moderate Minimal								
Daily Average by District	>96	<=96 to >30	<=30					
Daily Average by School	>16	<=16 to >5	<≡5					

- 2. **Staffing Levels -** (Tracked by Human Resources Department via Frontline) Data reported as of noon on Wednesday for each week.
 - 1. Certificated Staff Sick Day Absences (382 employees; 1,910 work days per week)
 - 2. Custodial Staff Sick Day Absences (34 employees; 170 work days per week)
 - 3. Support Staff Sick Day Absences (152 employees; 760 work days per week)
 - 4. Availability of Substitutes (As Measured by Unfilled Substitute Positions; Filled Internally)

Targe	ets for Staf		antine					
Substantial Moderate Minimal								
Weekly Average by District	>6	<=6 to >3	<=3					
Weekly Average by School	>1	<=1 to >0.5	<=0.5					

Note: Certificated and support staff worked only 3 of 5 days within this week. Because these data are an individual count of staff on quarantine, it is difficult to estimate for the remaining 2 days of the week.

Note: For the week of December 7th, the following staff report a need for quarantine/leaves requiring an onsite substitute. The quarantine/leave needs are in addition to the anticipated ongoing quarantines that could result from new exposure, symptoms and/or quarantine orders that develop over the next two weeks.

- Central School 5 Staff (3 Teachers, 2 Paraprofessionals)
- Harper School 2 Staff (2 Teachers)
- McKenzie School 1.5 Staff (1.5 Teachers)
- Romona School 8 Staff (2 Teachers, 1 Other Certificated Staff Member, 5 Paraprofessionals)
- Highcrest Middle School 10.5 Staff (7.5 Teachers, 3 Paraprofessionals)

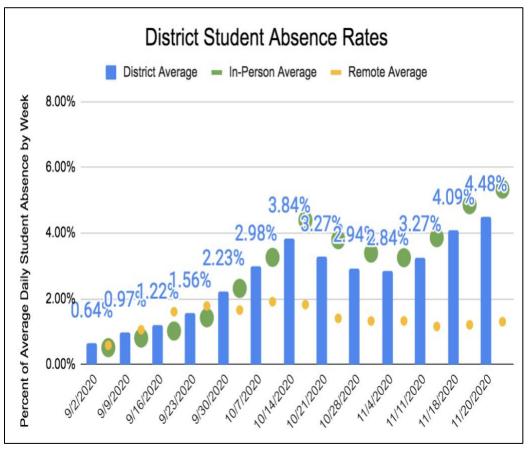

Data reported as of noon on Wednesday for each week.

5. Student Absences (Tracked within Student Information System)

1. Daily Student Absences

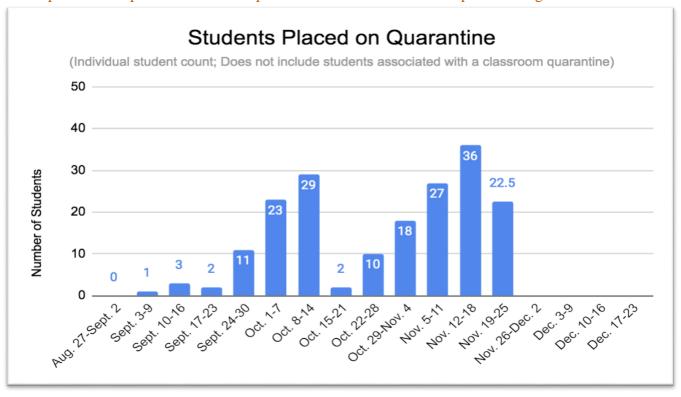

Date		Central Absences	ercent	rper	Harper Percent Absent	McKenzie Absence	Percent	Romona Absences	Romona Percent Absent	Highcrest Absences	Percent	NJHS Absences	Percent	District Absences	Distric Percen Absent
11/02/2020	14.5	3.37%	14	3.47%	14.	.5	3.46%	18	3.57%	10.5	1.29%	22	2.67%	93.5	2.75%
11/04/2020	11.5	2.67%	13	3.22%	23.	5	5.61%	19	3.77%	20.5	2.52%	38	4.62%	125.5	3.7%
11/05/2020	13	3.03%	15	3.71%	21		5.01%	12	2.38%	13.5	1.66%	26.5	3.22%	101	2.98%
11/06/2020	11.5	2.68%	23	5.72%	20		4.77%	9	1.79%	24	2.95%	28.5	3.46%	116	3.42%

11/20/2020	25	5.83%	23.5	5.85%	25		5.98%	16.5	3.3%	31.5	3.88%	45	5.48%	166.5	4.92%

Targets for Student Absences			
	Substantial	Moderate	Minimal
Weekly Average by District	>7%	<=6% to >4%	<=4%
Typical annual student attendance in District 39 in 95.7% (ISBE Report Card). Thus, typical student absence rates are approximately 4.3%.			

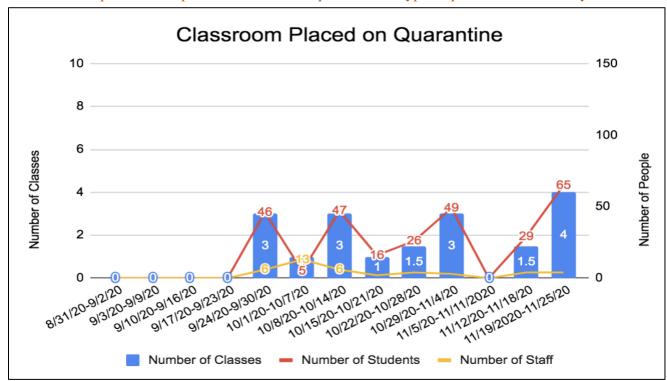

2. Student Quarantine Rates

Data reported as of noon on Wednesday for each week. These data reflect the number of students placed onto quarantine due to exposure outside of school and/or positive diagnosis.

3. Class Quarantine Rates

Data reported as of noon on Wednesday for each week. These data reflect the number of classrooms placed onto quarantine, as well as the number of students and staff associated placed onto quarantine as part of the classroom quarantine. A typical quarantine lasts 14 days.

6. Effective Instruction

1. Engagement Levels in Remote Learning

A Targeted Review of the D39 Enhanced Fully Remote Learning Program was conducted. <u>A Report of Findings</u> was presented at the October Board of Education Meeting (<u>Agenda</u> & <u>Video</u>). Follow-up action steps and improvement efforts were discussed and initiated, and will be presented at the October Board Committee of the Whole Meeting.

A Targeted Review of the D39 In-Person Learning Program was conducted. A <u>Report of Findings</u> was presented at the November Board of Education Meeting (<u>Agenda & Video</u>). Follow-up action steps and improvement efforts will be discussed and initiated, and will be presented at the December Board Committee of the Whole Meeting.

2. Learning Progress of Students

The district administered the NWEA MAP assessment to students in grades 2-8 to evaluate academic achievement and growth. The <u>2020 Fall Assessment Report</u> was presented at the November Board of Education Meeting (<u>Agenda & Video</u>).

7. **Current Scientific Research**: The research on SARS-CoV2 and COVID-19 continues to develop rapidly. The latest findings on spread, mitigation, treatment, and health impact will inform the District's decision-making process.

Note: A subcommittee of the Metrics Team is evaluating options for COVID-19 testing access and programming. The Board of Education approved on November 16, 2020 a contract with Ambry to expand access to PCR testing for students and household members of staff. The Board will consider a contract for a more regular screening/surveillance program at its Committee of the Whole Meeting on December 7. This program will be piloted for the week of December 14th and, if approved and successful, launched for access district-wide in January.

The following research articles are offered by team members

Summary:

- With the right safety protocols, schools are not a source of transmission (Germany even found that the opening of school reduced transmission)
- Younger kids get sick less and are less transmissive
- Increased community prevalence will put more pressure on schools because more students and staff will have the virus"

This presentation from WHO has a good synthesis of the research, as well as this article from Nature.

A few other recent studies:

- Kids, school, and COVID-19: What we know and what we don't
 - One of the largest studies, led by Brown University economist Emily Oster, PhD, analyzed in-school infection data from 47 states over the last two weeks of September. Among more than 200,000 students and 63,000 staff who had returned to school, Oster reported an infection rate of 0.13% among students and 0.24% among staff. The low infection rates support what other researchers have seen in smaller samples. "What we haven't seen are superspreader events" that ignited in schools, says Sallie Permar, MD, PhD, a professor of pediatrics and immunology at Duke. "The fear that you'd have one infected kid come to school, and then you'd have many other kids and teachers and relatives [at home] get infected that hasn't happened."
 - See also: Schools Aren't Super-Spreaders
- School Re-Openings after Summer Breaks in Germany Did Not Increase SARS-CoV-2
 - Over a large number of specifications, sub-group analyses and robustness checks, we do not find any evidence of a positive effect of school re-openings on case numbers. On the contrary, our preferred specification indicates that the end of summer breaks had a negative effect on the number of new confirmed cases. Three weeks after the end of summer breaks, cases have decreased by 0.55 cases per 100,000 inhabitants or 27 percent of a standard deviation. Our results are not explained by changes in mobility patterns around school re-openings arising from travel returnees. We conclude that school re-openings in Germany under strict hygiene measures combined with quarantine and containment measures have not increased the number of newly confirmed SARS-CoV-2 infections.
- Child care not associated with spread of COVID-19, Yale study finds
 - The study, <u>published in</u> the journal <u>Pediatrics</u>, found that exposure to child care was not associated with an elevated risk of spreading COVID-19 from children to adults, provided the child care programs took multiple safety measures including disinfecting, handwashing, symptom screening, social distancing, mask-wearing, and limiting group size and were located in communities where the spread of COVID-19 was contained. (Full article <u>here</u>)

Study from Duke

 $\frac{https://www.insidehighered.com/news/2020/11/18/duke-study-highlights-importance-broad-asymptomatic-testing}{https://www.cdc.gov/mmwr/volumes/69/wr/mm6946e1.htm?s_cid=mm6946e1_w}$

- Over the course of the first 10 weeks of the fall semester, Duke conducted 68,913 tests on 10,265 students. Slightly more than half (51 percent) of the 84 total students who tested positive were asymptomatic
- "Some of those individuals had some very high viral load numbers: what that translates to is how much virus they had when we tested them,"
- Also of note, the authors wrote that contact tracing has found no evidence linking transmission to in-person classes.
- The authors also found that student compliance with testing on their scheduled testing date was approximately 95 percent.

UNICEF: Schools are not 'main drivers' of Covid among kids
